Education

Stanford University

Expected graduation date: Jun. 2027

M.S. in Management Science and Engineering | [Link to all courses](#)

GPA: NA/4.0

Courses: Convex Optimization, Incentives and Algorithms, Mechanism Design, Causal Inference, Machine Learning

Stanford University

Expected graduation date: Jun. 2026

B.S. in Economics | [Link to all courses](#)

GPA: 3.7/4.0

Courses: Advanced Econometrics, Macro and Micro Economic Analysis, Mathematical Foundations of Computing, Market Design, Game Theory, Analysis of Variance and Regressions

Employment

Stanford Artificial Intelligence Lab (SAIL): Language Data and Reasoning Lab

May 2026 - Present

Research Intern

Optimization, Mechanism Design, Agentic AI

- Working on the optimization layer for a mechanism to optimize ecommerce for agentic AI crawling
- Created hypothesis generation layer that takes in agent actions and autonomously generates, tests, and proposes hypotheses of response policies

Stanford Institute for Human-Centered AI: Digital Economy Lab

May. 2025 - June 2026

Research Intern

Pandas, SKLearn, JavaScript, SQL, Machine Learning, NLP, Praw, Web Scraping

- Webscraped and leveraged PRAW to get data on over 45,000 Reddit comments and accounts to reverse engineering an XGBoost bot detection algorithm used on over 2 million accounts
- Employed NLP analysis on around 7 million Reddit comments and replies using TopicBERT word embeddings and manual clustering
- Analyzed data from over 243 million comments to train content ordering models to optimize for user engagement

Stanford Institute For Economic Policy Research

Jan. 2024 - June 2025

King Center Research Fellow

R, Python, Stata, LaTeX, Machine Learning

- Exploratory data analysis on climate-market data with over 1,000,000 observations of pricing, climate, and spatial data
- Employed various econometric techniques (DiD, pricing models, ect) and Machine Learning models (fBISG, logit, ect), worked with census surname datasets and spatial data spanning from city-wide, census block-group level, to precinct

Papers

Honors Thesis

2026 | DOI: 10.25740/jr505hq9443 | Published in Stanford Digital Repository

Stanford Economics Honors Thesis

Python, Reinforcement Learning, Econometrics

- Investigated and found that surgeon workforce at the transplant center level constitutes a capacity constraint for deceased donor kidney transplants
- Trained a reinforcement learning policy to rerank patients for high discard risk organs under capacity assumptions
- Investigated geographical patterns in deceased donor kidney transplantation across rural and urban areas

Leadership and Volunteering

Vice President of Associated Students of Stanford University

May 2025 - Present

Stanford's Student Body Government

- Elected Vice President of the Student Body Government of Stanford University, representing 18,000 students
- Oversee the Undergraduate Senate and the Graduate Student Council

Stanford Ralston Leadership Fellowship

Nov. 2022 - Jun. 2025

Program Coordinator

- Constructing curriculum and while coordinating with fellows from the Stanford GSB

Honors

Questbridge Scholar, Rensselaer Medal in Math and Science, Stanford School of Engineering Masters Fellowship

Skills

Python, Javascript, C++, R, Stata, Tableau, Excel, strong writer, Math, Data Analysis/Econometrics, Spanish
